CHECK BEFORE YOU BUY

- [ ] **Check the recall record**
  EU Safety Gate lists three Jimny recalls: fuel pumps whose resin impellers could swell and stall the engine (cars built 9 May to 22 November 2018, then a second campaign for 12 November 2018 to 7 September 2019), and door wiring harnesses that could break and stop the side and curtain airbags deploying (cars built to 2 December 2020). Ask a dealer to run the VIN.

- [ ] **Get underneath with a flashlight**
  BigJimny's wiki says every Jimny generation has 'particularly poor rust prevention' from the factory, and the usual spots are the chassis welds and the body and spring mounts. The JB74 is still young, but a truck from a salted-road region should show evidence of underbody protection.

- [ ] **Drive it at 45–50 mph**
  Steering shake in that band was the third generation's signature fault, from kingpin bearings in a poorly sealed knuckle. BigJimny expects the same on the JB74 because the design is so similar, so test-drive at that speed and rock each raised front wheel.

- [ ] **Inspect any lift kit properly**
  A good Jimny lift includes caster correction, a crossmember drop, extended brake lines and often a panhard bracket. Pedders notes the factory headlight-leveling bracket can't simply be extended without risk of breaking. Missing pieces mean someone took shortcuts.

- [ ] **Do the payload math**
  Unsealed puts the 3-door's factory payload at about 340 kg (750 lb), which a bull bar, winch, roof rack and two adults can use up. In Australia, check for a GVM upgrade plate or engineer's certificate if the truck is heavily accessorized.

- [ ] **Big tires without gearing?**
  Anything larger than 215/75R15 really needs lower gearing. Without it, BigJimny owners warn you'll quickly burn the clutch or overheat the automatic's fluid. Ask what ratio changes came with the tires.

- [ ] **Manual or automatic**
  Unsealed 4X4 couldn't see 'a viable reason to spend the three extra grand' on the four-speed auto in an XL. The manual is the enthusiast pick, and the autos are slower.

- [ ] **In the US? Ask how it got here**
  A 2018-on Jimny can't be legally imported into the US until it's 25 years old. CBP's 2022 Puerto Rico seizure ended with an order to bring the truck into compliance, export it or destroy it. Don't buy one with 'paperwork in progress.'

YEARS TO KNOW

2018	RECALL	Fuel-pump recall covers cars built 9 May to 22 November 2018, with a second campaign to 7 September 2019, and the door-harness airbag recall covers cars built up to 2 December 2020. Have a dealer confirm both were done

RECALLS TO ASK ABOUT

- [ ] **Fuel pump impeller may swell and stall the engine**
  Built 9 May – 22 November 2018 · EU Safety Gate A12/00956/21
- [ ] **Fuel pump failure (second campaign)**
  Built 12 November 2018 – 7 September 2019 · EU Safety Gate A12/00885/24
- [ ] **Door harness wires may break (side and curtain airbags)**
  Built from start of production to 2 December 2020 · EU Safety Gate A12/00955/21

IS IT THE REAL THING?

- [ ] **JB64 or JB74**
  The Japanese kei JB64 has no wheel-arch extensions and tucked-in bumpers, is 1,475 mm wide and uses the 658 cc R06A turbo three. The JB74 has bolt-on flares, is 1,645 mm wide and uses the 1.5 K15B.
- [ ] **Model code**
  The model codes are JB64W for the kei car, JB74W for the Jimny Sierra and global 3-door, and JC74W for the 5-door.
- [ ] **3-door or 5-door**
  The 5-door (Jimny XL in Australia, Nomade in Japan) has a 2,590 mm wheelbase versus 2,250 mm and is built only in India; the 3-door is built in Japan, and in India for some export markets.
- [ ] **Commercial version**
  UK and European Jimny Commercial vans have no rear seats and a partition behind the front seats. They were homologated as light commercial vehicles.
