PRE-PURCHASE INSPECTION CHECKLIST

Ineos Grenadier Quartermaster

2023–present (US: 2025–present) · Double cab pickup · 3,227 mm WB

BOXYTRUCKS

CHECK BEFORE YOU BUY

- [ ] **Run the VIN at NHTSA**
  Recalls 23V828 (auxiliary switch relay wiring), 23V903 (steering ball-joint nuts) and 25V147 (door buttons) are filed against 2023–2024 Grenadiers. As of October 2026, NHTSA's recall database lists none for 2025–2026 models. Check every truck by VIN anyway, and get proof that any open campaign was closed.

- [ ] **Do the payload math before you buy a camper**
  Payload is modest for a pickup: about 1,675 lb at US launch, and 832–907 kg in Australia depending on engine. A canopy, fridge, water, a second battery and a winch use that up quickly. Expedition Portal says even its Trialmaster test truck (winch, dual batteries, bed rack) is rated at about 1,400 lb. In Australia, Caravan World quotes a GVM upgrade to roughly 3,900–4,000 kg for about A$5,800 plus fitting.

- [ ] **Know where the spare will live**
  From the factory the spare stands in the bed, sticks up above the bed sides and has to come out before a pallet will fit. It also gets in the way of flat tonneau covers. Ask whether the spare has been relocated (owners have moved it under the deck or under the rear axle) and check that the new mount is solid.

- [ ] **Drive it empty and on the highway**
  Several INEOS Forum owners describe an unladen Quartermaster as 'jittery' over bumps in a way the wagon isn't, though it settles once a canopy and gear go in. Pre-2026 trucks also have the slow, non-self-centring steering box and a 14.5 m turning circle. MY2026 trucks get the variable-ratio box and a turning circle about 5% tighter.

- [ ] **Wellside or cab-chassis?**
  Outside the US you can buy a cab-chassis and fit a tray. Ineos and Norweld offered early Australian cab-chassis buyers a A$7,000 tray contribution, with conditions. Caravan World lists Norweld trays from A$18,990 and canopies from A$19,205, so a tray build costs a lot more than the tub truck, but it gives you a flat, wider deck.

- [ ] **Confirm the lockers and Trialmaster kit**
  The centre diff lock is standard on every truck. Front and rear lockers come on the Trialmaster or with the Rough Pack. The locker switches are in the overhead panel, and the centre lock is on the transfer lever. Trialmaster trucks also get a raised air intake and all-terrain tires.

- [ ] **Check the bed for tie-down track and holes**
  Some dealers fit L-track to the bed and sides. One forum owner noted that some trucks were built without bed rails, so adding them means drilling and countersinking. Look for neat, sealed holes and no rust starting around the fasteners.

- [ ] **Ask about parts and the dealer**
  Caravan World scored accessibility of spare parts 7/10. The engine and gearbox come from BMW and ZF, but body, bed and chassis parts come through Ineos's small network. Ask the nearest dealer about lead times, especially if you travel remote.

YEARS TO KNOW

MY2026	SWEET SPOT	Variable-ratio steering, about 5% tighter turning circle, better HVAC; no base trim on US 2026 price lists

IS IT THE REAL THING?

- [ ] **Lockers**
  The centre diff lock is standard. Front and rear lockers come on the Trialmaster or with the Rough Pack; the switches are in the overhead panel and the centre lock is on the transfer lever.
- [ ] **Steering generation**
  MY2026 trucks have the variable-ratio box and roughly 5% tighter turning circle; earlier trucks have the slow recirculating-ball setup unless an aftermarket pump kit has been fitted.
- [ ] **Body type**
  US trucks are all double-cab wellside pickups. The cab-chassis for trays is an Australia/New Zealand model.
- [ ] **Bed equipment**
  Some trucks were built without bed rails and some dealers fit L-track; look for neat, sealed holes. Check where the spare lives, since it stands in the bed from the factory.
- [ ] **Engine**
  US trucks are BMW B58 3.0 petrol; the B57 diesel was sold in Europe, Australia and New Zealand.
