BOXYTRUCKS

CHECK BEFORE YOU BUY

- [ ] **Run the VIN for recalls first**
  NHTSA lists more than a dozen WS campaigns. Many are rear-camera software fixes (23V-577, 24V-436, 24V-944, 26V-326, 26V-531). There's also an airbag-control software fix (21V-873), a B-pillar trim that can foul the curtain airbag (23V-545), third-row belt buckles (23V-716), door and window trim that can fall off (25V-593, 25V-642), roof-rack crossbar pivot bolts (26V-584) and TPMS software (26V-559). Make sure each one is closed.

- [ ] **Cycle the air suspension through every height**
  On an air-sprung truck, run it from Park to Off-Road 2 and back with the engine idling, and look for a 'Service Air Suspension' message. Early 2022 trucks built on or before February 15, 2022 are covered by TSB 02-001-22: unseated air lines, an unplugged control module, disconnected height sensors and even red shipping caps left on the compressor vent hose.

- [ ] **Ask whether the software is current**
  This truck runs on software. Bulletins cover blank or frozen 10.1- and 12-inch center screens (radio update TSB 08-039-22), power-steering module flashes (08-202-22) and telematics resets (08-173-21). MotorTrend's long-term Wagoneer was updated at every dealer service. Check the screens, cameras, remote start and app connection before you sign.

- [ ] **2022 5.7 eTorque: test low-speed stop-start**
  In 2024 NHTSA opened a probe into reports of 2022 Ram 1500s and Wagoneers losing power, with the engine shutting off at low speed. On a test drive, do several stops and restarts in traffic and note any warning lights. Ask whether any dealer work was done on the eTorque system or the 48 V battery, which sits under the cabin floor.

- [ ] **Know which 4×4 system it has**
  Quadra-Trac I is single-speed, with no low range. For trails, look for Quadra-Trac II or Quadra-Drive II with the 2.64:1 low range. Best of all is the Advanced All-Terrain Group, with a 3.92 axle, rear electronic LSD, 18-inch all-terrain tires, skid plates and tow hooks. A rear-drive Wagoneer is a different vehicle altogether.

- [ ] **Check the oil in the service records**
  The standard-output Hurricane specifies 0W-20, while the high-output Hurricane in Grand Wagoneers specifies 0W-40 (MS-A0921). A Grand Wagoneer serviced with the wrong oil by a quick-lube shop is a reason to ask more questions. The 6.4 also uses 0W-40, and the 5.7 uses 0W-20.

- [ ] **If you'll tow, look for the right package**
  The 10,000-lb rating applies to properly equipped Wagoneers. The Heavy-Duty Trailer Tow package adds the trailer brake controller, hitch zoom and heavy-duty cooling. MotorTrend found the hitch sat oddly high, so they needed a big drop hitch, and the air suspension kept adjusting ride height with a trailer attached.

- [ ] **Price it against a new one**
  A new 2026 Grand Wagoneer starts at $64,740, so check new-truck pricing and incentives before paying close to that for a used one. Bring a Trailer has sold only one WS so far: a 2025 Grand Wagoneer L Series III for $78,500 in January 2026.

RECALLS TO ASK ABOUT

- [ ] **Airbag control module software**
  2022 · NHTSA 21V-873
- [ ] **Second-row center-seat recliner strap**
  2022 · NHTSA 21V-919
- [ ] **B-pillar trim and curtain airbag**
  2022–2023 · NHTSA 23V-545
- [ ] **Rear camera (CVPAM software)**
  2022–2024 · NHTSA 23V-577
- [ ] **Third-row seat belt buckles**
  2022–2024 · NHTSA 23V-716
- [ ] **Steering column control module weld**
  2023–2024 · NHTSA 24V-199
- [ ] **Rear camera (radio software)**
  2022–2023 · NHTSA 24V-436
- [ ] **Rear camera module software**
  2024 · NHTSA 24V-944
- [ ] **Door trim may detach**
  2022–2025 · NHTSA 25V-593
- [ ] **Window quarter trim may detach**
  2022–2024 · NHTSA 25V-642

IS IT THE REAL THING?

- [ ] **Wagoneer vs Grand Wagoneer (2022–2025)**
  Same body and size. Grand Wagoneers have a two-tone black roof, fender flares, power retractable side steps, a 12.3-inch cluster and a different grille, and air suspension is standard. Wagoneers have a standard side step and a 10.25-inch cluster, and air suspension was optional. From 2026 everything is badged Grand Wagoneer, with Jeep logos front and rear.
- [ ] **Short vs L**
  L models ride on a 130.0-inch wheelbase (123.0 standard) and are 226.7 inches long (214.7 standard). Look for a longer rear door-to-D-pillar section and quarter glass.
- [ ] **Which engine**
  AMSOIL's lookups list engine code T for the 5.7 Hemi (sales code EZL), J for the 6.4 Hemi (ESG) and P for the 3.0 Hurricane, split into EFH (standard output) and EFC (high output). The window sticker or a VIN decoder confirms which one you have, and that decides the oil grade.
- [ ] **Air or coil suspension**
  Quadra-Lift trucks carry sales code SER, show ride-height controls next to the Selec-Terrain toggle and offer Tire Jack mode in the Suspension menu. Coil trucks can't be raised from the cabin.
- [ ] **4×4 system and off-road package**
  Quadra-Trac I has no low range. Two-speed trucks (Quadra-Trac II, Quadra-Drive II) have a low-range selection. The Advanced All-Terrain Group adds 18-inch all-terrain tires, front tow hooks, skid plates, a 3.92 axle and the rear electronic LSD, so check under the front for the skid plate.
