CHECK BEFORE YOU BUY

- [ ] **Service history first**
  GXOR's buying guide puts maintenance records ahead of mileage. A high-mileage truck with records beats a low-mileage one without. Pull the Lexus dealer history on the Lexus Drivers site before you go and look.
- [ ] **Coolant on the bell housing**
  Crawl behind a front wheel and look up at the transmission bell housing. Pink crust there points to the coolant valley leak, which shows up around 100k miles. Also check the water pump weep hole at the front of the engine.
- [ ] **Oil around the filter**
  Oil residue near the oil filter and lower engine can be the driver-side timing cover, not the filter. Dealers have quoted $2,600–3,500 because the engine has to come down. Price it in or walk.
- [ ] **Cold-start shifting**
  Drive it from a cold start for 15 minutes. If it won't shift 3–4 and throws P2714/P0761 with VSC and 4LO lights, you've found the solenoid problem that has led some owners to $7–8k transmission replacements.
- [ ] **Secondary air pump (2010–2013)**
  Failures of the pump and its air injection valves were common on early trucks and can put the truck in limp mode. Lexus extended coverage. Check whether the updated parts are already in.
- [ ] **Center diff lock and driveshaft**
  Lock and unlock the center diff. A seized actuator can cost $1k+. Listen for driveshaft clunks. Grease is a temporary fix, and a Lexus TSB covers updated parts.
- [ ] **Rear air springs**
  Premium ('10–'13) and Luxury ('14-on) trucks ride on rear air. Look for sag after sitting overnight and a busy compressor. ClubLexus regulars say failures are rarer than on the GX 470 and fixes are cheap, but check anyway.
- [ ] **Frame rust and radiator**
  Frame rust is the dealbreaker on salt-belt trucks. GXOR also notes radiators often start leaking between 100k and 150k miles. It's an easy job, but factor it in.

YEARS TO KNOW

2010–2013	BEWARE	Secondary air-injection pump and valve failures are common; ClubLexus moderators call it a known 2010–13 problem. Confirm the parts were replaced under program ZLH.
2014	SWEET SPOT	First facelift: spindle grille, LED headlamps and LED DRLs, with a US price cut of $4,750. ClubLexus moderators say air-pump trouble is far less common from 2014 on.

RECALLS TO ASK ABOUT

IS IT THE REAL THING?

- [ ] **Vehicle stability control too slow**
  2010 · NHTSA 10V-159
- [ ] **Takata front airbag inflators (replacement inflators)**
  2010–2017 · NHTSA 19V-741
- [ ] **Takata front passenger airbag inflator (zone-based)**
  2010–2011 · NHTSA 16V-340
- [ ] **Takata front passenger airbag inflator**
  2010–2017 · NHTSA 19V-005
- [ ] **Low-pressure fuel pump**
  2014–2015 · NHTSA 20V-012
- [ ] **Low-pressure fuel pump (expansion)**
  2018–2019 · NHTSA 20V-682
- [ ] **Load-capacity modification label**
  2018 · NHTSA 17V-831

- [ ] **VIN**
  US trucks start JTJ and carry 7FX in positions 6–8. NHTSA's vPIC decoder reads the series as URJ150L, the engine as the 1UR-FE and the plant as Tahara, Japan. The 10th character is the model year (A = 2010 through P = 2023).
- [ ] **Off-Road package (2020+)**
  Crawl Control and Multi-Terrain Select switches, a 360-degree camera, a transmission cooler and a fuel-tank protector. 2010–2019 trucks can be retrofitted with Crawl Control and MTS.
- [ ] **Rear air (RAHC) and AVS**
  Upper trims have rear height control air suspension and Adaptive Variable Suspension. KDSS is standard on every US GX 460.
- [ ] **Facelift generation**
  2010–2013: original grille. 2014–2019: first spindle grille and LED headlamps. 2020–2023: angular spindle and triple-beam LEDs.
- [ ] **Black Line**
  A 2022 cosmetic package that couldn't be ordered with some luxury features such as Mark Levinson audio.
