PRE-PURCHASE INSPECTION CHECKLIST

Lexus LX 600

2022–present · J310 · V35A-FTS

BOXYTRUCKS

CHECK BEFORE YOU BUY

- [ ] **Recall status, in writing**
  Run the VIN for 24V-381 (engine replacement, trucks built July 2021 to November 2022) and 25V-767 (Lexus 25LA07, built February 2022 to April 2024). Get dealer paperwork showing what was done. A replaced engine is a selling point.
- [ ] **Listen for a knock**
  The recalls list knocking, rough running, a no-start and a loss of power as symptoms. Start it cold and listen at idle and under light load.
- [ ] **Rolling-stop behavior**
  Owners report a clunk into first gear during rolling stops on 2022–2024 trucks, plus sluggish throttle that eases when the pre-collision system is set to its shortest distance. Test both so you know what's normal for these trucks.
- [ ] **Which grade?**
  The F Sport gets a Torsen rear LSD and a rear stabilizer bar, but also 22-in forged wheels that limit tire choice. Ultra Luxury is a four-seater. US LX 600s have no axle lockers in any grade.
- [ ] **AHC health**
  Cycle through Low, Normal, Hi1 and Hi2 and confirm each height is reached and held. Some trucks were ordered without AHC. Know which one you're buying, because lift options differ.
- [ ] **Tailgate and electronics**
  An owner-reported power hatch that beeps and refuses to close was usually a weak key-fob signal or a hatch that needed a manual close to relearn its position. Check that everything works before you assume a fault.
- [ ] **Bulletin and warranty history**
  Ask for the dealer service history. Lexus has issued bulletins for front-brake squeal on 2022–2024 trucks (L-SB-0036-24), a windshield-molding buzz above 55 mph (L-SB-0019-24) and a head-unit software update for 2022 models (L-SB-0027-24). Work already done under them is a good sign.
- [ ] **Power back door**
  Open and close the hatch several times with the button, the key and the kick sensor. If it beeps twice and won't move, suspect a pinch sensor. IH8MUD owners have had them replaced under warranty.

YEARS TO KNOW

2022–2024	BEWARE	Engine recalls 24V-381 and 25V-767 cover main-bearing debris. Owners also report a clunk into first on rolling stops.

RECALLS TO ASK ABOUT

IS IT THE REAL THING?

- [ ] **V35A engine main-bearing debris**
  2022–2023 · NHTSA 24V-381
- [ ] **V35A engine main-bearing debris (expansion)**
  2022–2024 · NHTSA 25V-767
- [ ] **Unexpected movement in neutral**
  2022–2024 · NHTSA 24V-125
- [ ] **Passenger seat occupant-classification sensor**
  2022–2024 · NHTSA 26V-180
- [ ] **Transmission/engine ECU communication**
  2025–2026 · NHTSA 26V-094
- [ ] **Panoramic View Monitor camera freeze**
  2022–2025 · NHTSA 25V-744
- [ ] **VSC may not re-enable on restart**
  2022 · NHTSA 22V-239

- [ ] **VIN**
  US trucks start JTJ and carry 7CX in positions 6–8. NHTSA's vPIC decoder reads them as the 310 Series with the V35A-FTS, built at Toyota Auto Body's Yoshiwara plant. The 10th character is the model year (N = 2022, P = 2023, R = 2024, S = 2025).
- [ ] **Lockers**
  US LX 600s have a lockable center diff only. Triple locks came on Japan's LX Offroad grade and, in the US, on the LX 700h Overtrail, which is a different model.
- [ ] **F Sport Handling**
  22-in forged wheels and a Torsen limited-slip rear differential.
- [ ] **AHC or not**
  Most trucks have Active Height Control, but Slee Off-Road's build was a Premium custom-ordered without AHC so it could run Dobinsons suspension. Check before planning a lift.
- [ ] **Engine recall status**
  2022–2024 trucks may be in 24V-381 or 25V-767 (Lexus 25LA07). Ask for paperwork showing the inspection or replacement engine.
