PRE-PURCHASE INSPECTION CHECKLIST

Land Rover Range Rover L460

2022–present · L460

BOXYTRUCKS

CHECK BEFORE YOU BUY

- [ ] **Run the VIN against every recall**
  NHTSA lists a stack of campaigns: a cam-carrier oil channel (2022–2023), 7-seat second-row frame welds (2022–2023), tail-light links (2022–2023), rear-camera water ingress (2022–2023) and tailgate camera drain holes (2022–2026), body panels not bonded properly (2024), transmission oil pressure (2024), a cracking oil filter housing (2024), the driver's airbag clockspring connector (2022–2026), and the DC-DC converter (26V248000 and 26V599000, 2022–2024 L460s). Get written confirmation that they're closed.

- [ ] **Ask about the DC-DC converter**
  On mild hybrids, a failing 48-volt to 12-volt converter shows 'Stop – electrical fault' with a red battery light and stops charging the 12-volt battery. Owners say it may log no fault and clear itself, only to return. Dealers have had cars waiting weeks for back-ordered modules. NHTSA recalls 26V248000 and 26V599000 are interim software updates, with a final remedy to follow.

- [ ] **Check that it goes to sleep**
  Flat 12-volt batteries after a few days parked are a recurring forum topic. Dealers have fixed some with door-module and other software updates, and one owner traced the same symptom to a brake-pedal security lock that kept the car from sleeping. Ask whether it has needed jump-starts, and whether any aftermarket immobiliser or tracker is fitted.

- [ ] **Check the build spec on early trucks**
  Owners say many early (2022) trucks were delivered with downgraded audio and other options during the parts shortage. Check the car against its original order or a parts catalogue before paying for options it doesn't have.

- [ ] **Know which V8 you're getting**
  P530s built for 2022–2023 use BMW's N63 twin-turbo V8, while 2024-on trucks got the newer S68. Forum owners rate the S68 as significantly more refined. It's also the engine in the SV P615.

- [ ] **Look at the service history, not just the stamps**
  Service intervals were up to 21,000 miles or 24 months, and owners report the 2024 model year D350 dropped to 10,500 miles or 12 months. Many owners change the oil more often than the schedule asks. A truck run to the maximum on short urban trips deserves extra scrutiny.

- [ ] **Check software and connectivity**
  Updates arrive over the air, but one 2022 owner whose truck was stuck on an old version found reports of a telematics (TCU) problem on some 2022–23 trucks. Check the software version against Land Rover's published releases, and confirm the remote app works.

- [ ] **Mind the wheel bolts and wheel size**
  The L460 uses wheel bolts, not the studs and nuts of the L405, so older Range Rover wheels need the correct flat-seat bolts. Owners say 22- and 23-inch wheels ride harshly on broken roads. For trail use, a smaller wheel with more sidewall is the better bet.

RECALLS TO ASK ABOUT

- ☐ **Cam carrier oil channel**
  2022–2023 · NHTSA 23V-044
- ☐ **7-seat second-row seat frame welds**
  2022–2023 · NHTSA 23V-252
- ☐ **Second-row armrest latch**
  2022–2023 · NHTSA 23V-324
- ☐ **Tail-light link**
  2022–2023 · NHTSA 23V-394
- ☐ **Rear camera water ingress**
  2022–2023 · NHTSA 24V-947
- ☐ **Rear camera drain holes**
  2022–2026 · NHTSA 26V-678
- ☐ **Body panels not bonded properly**
  2024 · NHTSA 23V-872
- ☐ **Oil cooler hoses**
  2024 · NHTSA 23V-790
- ☐ **Oil filter housing**
  2024 · NHTSA 24V-450
- ☐ **Transmission oil pressure loss**
  2024 · NHTSA 24V-380

IS IT THE REAL THING?

- ☐ **Which V8**
  P530s built for 2022–2023 use BMW's N63 twin-turbo V8. From the 2024 model year the V8 is the newer S68, which is also in the SV P615.
- ☐ **Which plug-in hybrid**
  The P440e and P510e (2022–23) were replaced for 2024 by the P550e. All use a 38.2 kWh battery (31.8 kWh usable). PHEVs aren't offered as seven-seaters.
- ☐ **Rear differential**
  Upper trims get the Electronic Active Differential with torque vectoring. US-spec SE trucks have an open rear diff with torque vectoring by braking.
- ☐ **Seats and wheelbase**
  Four-, five- and seven-seat layouts are available. Seven seats come only on the LWB (3,197 mm wheelbase, 5,252 mm long). The SWB is 2,997 mm.
- ☐ **Wheels**
  The L460 uses wheel bolts, not the L405's studs and nuts. Factory wheels run from 20 to 23 in. Older 5×120 Range Rover wheels fit with the correct flat-seat bolts.
